of a very modern design were installed during the first quarter of 1951. They were, however, of such inferior quality that they were considered "worn out" after three months use.

- The plant obtained its raw materials from the Hunedeara Combine and from Resita. The average delay in delivery amounted to fire or six months in mid-1951.
- 9. At the end of June 1951 the number of personnel amounted to 280, of whom 210 were unskilled laborers.
- 10. Personalities.

Political Director Stan Stanica. Technical Director Ion Fulga Head of Commercial Robert Novetny Department Head of Technical Mihail Grabany office

50X1-HUM

Economic Controller

Alexandru Antonescu.

Head of Flanning

Veanu Christolo.

Trade Union

Ion Batranu.

- 11. Work was parried out in two shifts from 6a asto 2ppm, and from 10ppm, to 62 May Since early 1950 the shift from 2 to 11 has been discontinued.
- 12. Electric power was supplied by the Bucharest Grozavesti Works. The 1960 consumption of Technometal amounted to 40,000 kw. Crude oil was used in the foundry. In October 1951 the use of crude oil was to be discontinued in favor of methane gas from Copsa Mica. Construction of the supply pipeline for Technometal started in March 1951 at the Gara De Nord railway station. In July 1951 work had reached the immediate vicinity of the factory. Technometal's yearly requirement of methans gas was estimated at 700,000 cubic meters.
- 13. Since 1951 the Bucharest power works have been unable to supply "roundthe-clock" power to industrial installations. As a result, factories were requested to cut down hours of work. In the case of Technometal the shift from 2 to 11 PK was discontinued.
- 14. Location of factory and surrounding area.

The following is the key to the sketch attached as Appendix A, to this report:-

- No. 1 Gara de Nord Railroad Station.
- No. 2 B. M. (Bucharest Marfuri) depot railroad station.
- No. 3 Grivitei Avenue.
- No. 4 No. 1 Budurestii Avenue.
- No. 5 Chitilei Road,
- No. 6 Funcil Avenue.
- No. 7 Colentina River, 8-10 meters wide.
- No. 8 Railroad station Chitila-Triaj.
- No. 9 Streetcar depot.

- No. 10 Rolling mill Uzinele Laminorul (formerly Laromet) employing 1,500 workmen.
- No. 11 Technometal factory.
- No. 12 Deserted brick kiln (Fabrica de Caramizi Bazilescu).
- No. 13 Bazilescu cemetery.
- No. 14 Straulesti cemetery.
- No. 15 Straulesti slaughterhouse.
- No. 16 Straulesti airfield and pilot training school.
- No. 17 Reinforced concrete railway bridge named Podul Constanta.

  This bridge was based on four reinforced concrete pillars.

  It was about 25 meters long and six meters high. The bridge spanned Grivitei Avenue which had a double transline.
- No. 18 Small wooden railway bridge.

#### Distances.

From No. 8 to No. 11 = about 3 kms. (along the railway 15 ne.) From No. 11 to No. 12 - 1,800 meters (along the railway line.) From No. 15 to No. 11 = 1 km. From No. 11 to No. 17 = 2.5 kms. From No. 17 to No. 2 = 6.2 kms. From No. 2 to No. 1 = 0.8 kms. From No. 11 to No. 13 = 0.6 kms. From No. 17 to No. 16 = 4 kms.

#### 15. Layout of the Factory.

The following is the key to the sketch attached as Appendix B. to this report:

- No. 1 No. 1 Bucurestii Avenue.
- No. 2 Muncii Avenue.
- No. 3 Colentina River.
- No. 4 Wooden fence about 1,8 meters high.
- No. 5 Entrance.
- No. 6 Doorkeeper's hut.
- No. 7 Reinforced concrete building built in 1937 and measuring 56 x 15 x 4.5 meters. This building was divided into 4 parts, as follows:
  - (a) Store containing <u>inter alia</u>: east iron, steel, gasoline, coke, coal, parbide, bottled expea, tools, etc.
  - (b) Garage for three motor vehicles.
  - (v) Welding shop.
  - (d) File making department (Atelier de Pile).
- No. 8 Reinforced concrete machine shop measuring 25 x 32 x 5.5 meters, containing the following machinery.

Thirty parallel lathes from 0.30 to 3 meters and 1 to 3 h.p. Twelve automatic lathes of 0.40 meters and 1 to 3 h.p. Six semi-automatic lathes of 0.60 meters and 1 to 3 h.p. Pour small planes with 0.60 meters range. One large plane with a range of 1.60 meters. Six presses, up to 60 tons each. One circular saw.

One horizontal saw.

No. 16 Methane gas control room, an underground construction is 0 F 3 methans.

No. 17 Sentry box.

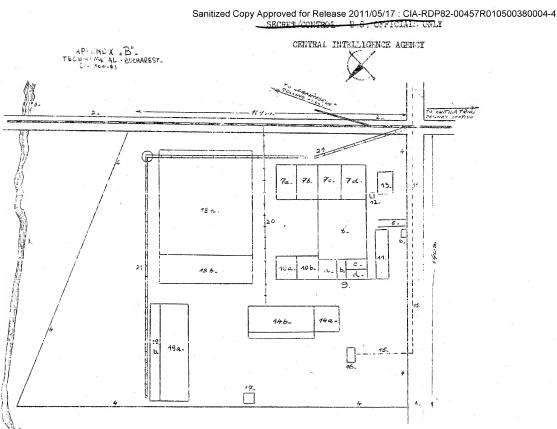

### 16. Expansion Work.

The figures mentioned below refer to the sketch attached as Appendix B. to this report:

- No. 18 Reinforced concrete construction 86 x 60 meters, to be completed during the second half of 1951. It comprises two buildings, as follows:-
  - (a) Single-story construction 70 x 60 x 5 meters, which will be used as a new machine shop. Buildings Nos. 7-10 will be converted into workshops for the repair and maintenance of the factory's installations and stores.
  - (b) Two-story construction 60 x 16 meters, to be used as technical offices and baths.
- No. 19 Reinforced concrete construction 70 x 16 x 3 meters, to be completed during the second half of 1951. It comprises two buildings as follows:-
  - (a) Foundry 70 x 12 meters. A 15-ton grane was also to be installed. The present foundry (No. 14) will be converted into a tumber store for patterns.
  - (b) Concrete construction  $70 \times 4 \times 5$  meters, to accommodate the furnaces.
- No. 20 A narrow gauge line under construction since June 1951.
- No. 21 Planned location of a railroad line to be constructed by the end of 1951.
